

Network Disclosure Announcement #296

Public Notice of Network Change(s), pursuant to CFR 47, subsections 51.325 - 51.335.
Qwest Communications Internet address: <http://www.qwest.com/disclosures>.

Bulk Calling Line Identification (BCLID) Update 6/26/96

Original Disclosure Date: November 15, 1990

Revision to Network Disclosure News #285

Summary:

This update adds selected 5ESS and 1AESS switches in UTAH to U S WEST's planned deployment schedule. This disclosure completely replaces #285. An asterisk in the left margin denotes a change or addition to the previous release.

The Bulk Calling Line Identification (BCLID) feature is a Local Area Signaling Services (LASS) feature. LASS Bulk Calling Line Identification provides Private Branch Exchange (PBX) with or without Direct Inward Dialing (DID), Multiline Hunt Group (MLHG), and 1AESS BRCS/Centrex groups and/or lines to receive call-related information on calls received from outside the PBX, MLHG and 1AESS BRCS/Centrex group(s). Currently, subscribers will not receive BCLID messages in the following two circumstances:

1. Centrex/Centron groups are excluded from this service when applied to the 5ESS.
2. Intra-switch capability is not available in the 5ESS.

* The call-related information transmitted per incoming call is:

- The calling line multistatus - set to "M" for multi, if the true calling DN cannot be identified, otherwise set to "T" for true DN.
- The time the call was received - hours, minutes, and seconds.
- The called DN - replaced by port/terminal number, and group identifier of called party, if multiline hunt group.
- Busy/idle status of called DN - if it cannot be determined that the called DN is busy, the status is always set to idle.

Both the 1AESS and 5ESS switch types send identical message information. This match is accomplished by requiring the 5ESS switch to pass a * "Type 3" message code frame.

Pricing:

In addition to the Utah updates, BCLID is offered under tariff in the following States: Arizona, Colorado, Idaho, Iowa, Minnesota, Montana, Nebraska, New Mexico, Oregon and Washington. In Arizona, Colorado and New Mexico, BCLID is offered under tariff as "Caller Identification - Bulk," and under price list in Nebraska.

Locations and Timing of Deployment:

The attached deployment list identifies the 1AESS and 5ESS switching locations where this capability is either planned or actually available.

Interface Requirements:

Network interface specifications are contained in the following documents. Please note that U S WEST Communications, Inc. requires a 202T, 1200 bits per second, four wire private line compatible modem rather than the 212A modem as indicated in the specifications.

[Back to top](#)

Document name: AT&T document #235-190-130, Local Area Signaling Services Bulk Calling Line Identification. Additionally, please refer to CIR 231-099-027IR Interface Information (Protocol) - Local Area Signaling Services for the 1AESS Switch.

Price: 235-190-130 = \$0.00

CIR: 231-099-027IR = \$2.98

To obtain these documents, write or call:

AT&T Customer Information Center
P. O. Box 19901
Indianapolis, IN 46219
