

CenturyLink Cybersecurity Services

CenturyLink Government offers agencies **Carrier-Class Connectivity** with unparalleled reliability across our Tier 1 global network, providing immediate access to **Colocation** services worldwide. And our energy efficient data centers support agile, hybrid **Cloud** solutions that are scalable to meet customer data needs. All of CenturyLink's services are protected by our industry-leading **Cybersecurity** measures and come with our **Commitment** to collaborating to deliver best-in-class solutions.

A Government agency is only as secure as its network. CenturyLink's broad array of Managed Security Services offer layers of security to protect government agency data from desktop to the Cloud.

In February 2013, the Department of Homeland Security's (DHS) Enhanced Cybersecurity Services (ECS) program was expanded by Executive Order to all Critical Infrastructure (CI) sectors.

CenturyLink Government is an original, and fully approved, Commercial Services Provider (CSP) for the DHS ECS program, and provides advanced email and DNS security to CI entities utilizing government-furnished threat and technical information.

CenturyLink's ECS and Managed Security Services offer a multi-layered security approach that can help to protect data and keep government agencies fully and efficiently operational.

Purpose-driven, Cloud-based Solutions, Securing Government Agencies

Trusted Internet Connection (TIC)

IPSS

Managed Firewall

Intrusion Detection and Prevention

Anti-Virus Management

Managed E-authentication

Vulnerability Scanning

Secure Managed Email

Incident Response

Network-Based Security

Distributed Denial of Service (DDoS)

CenturyLink[®]
Government

- **Trusted Internet Connection (TIC)**—Provides government agencies with a private MPLS transport infrastructure to direct traffic from the agency's location to a secure TIC gateway hosted in CenturyLink's data centers.
- **IPSS**—Secure protection for the government's civilian agencies (.gov).
- **Managed Firewall**—Offers Firewall/VPN technology tiered to meet the performance and perimeter security needs of both small and large government agencies.
- **Intrusion Detection and Prevention**—Alerts agencies in advance of any critical threats to their security infrastructure.
- **Anti-virus Management**—Leverages industry-leading AVMS software and hardware components to safeguard agencies' public and private networks and their application servers from malicious content.
- **Managed E-authentication**—Protects internal networks and systems from unauthorized access and hostile activity, protecting government agencies' critical data from compromise and tampering.
- **Vulnerability Scanning**—Detects unauthorized access, incorrect configuration settings, unauthorized and untested changes, and other possible intrusion points.
- **Secure Managed E-mail**—Helps ensure additional protection of sensitive information and intellectual property against unauthorized access, exfiltration, and exploitation.
- **Incident Response**—Combines advanced hardware, software, and reporting capabilities through a comprehensive portal with 24/7 management and a world-class incident response team.
- **Network-Based Security**—Enables security, which is embedded within CenturyLink's network, in order to manage cyber attacks.
- **Distributed Denial of Service (DDoS) Mitigation Service**—Implements network-based threat detection and mitigation services with an additional level of protection for agencies' Internet activity.

CenturyLink's Cybersecurity Portfolio: Layers of Protection
