

CENTURYLINK® ADAPTIVE THREAT INTELLIGENCE SERVICE

SEE MORE. STOP MORE.™

The number and variety of threats to your business's data and infrastructure are constantly increasing, and the sheer quantity of threat data being generated means the classic methods of observing and reporting are no longer enough to keep up.

Threat intelligence can't just mean a stack of malicious IP Addresses piled on your desk anymore or expensive boxes piled in your network. It can't mean more work. Actionable threat intelligence means that indicators of compromise (IOCs) to your network are automatically identified and prioritized for you in an easy-to-use portal or in your security information event management system (SIEM). With the CenturyLink Adaptive Threat Intelligence service, your communications with suspected bad actors are presented in a clean, actionable way, supported by expert staff. We manage threat correlation for our customers, saving you precious time and unneeded expense. The CenturyLink Adaptive Threat Intelligence service does the work for you, so you can focus on acting on threats, instead of digging for them.

Business Solutions

Security costs are rising and an overwhelming amount of data makes it difficult to determine what information is truly relevant and actionable. The CenturyLink Adaptive Threat Intelligence service correlates actual threat data communications, allowing your security team to quickly and accurately observe and act on any incoming threats to your company.

Without CenturyLink

Acquire Reputation Feeds	Higher Expert Staff
Process Reputation Feeds	Integrate into SIEM

Procure UI Tool	Act Against Threats
Procure Reports	

With CenturyLink

Provide Your IP Service
Review Your Portal
Act Against Threats

- No expensive on-site equipment or installation
- No long development cycles or difficult integration
- Threat correlation provided by CenturyLink Communications, the work done for you
- A team of experts supporting you, saving the challenge and expense of hiring your own
- Streamlined, actionable data means you spend less time investigating, and more time acting against threats

Technical Features / Capabilities

- Our Adaptive Threat Intelligence service leverages CenturyLink's team of experts, Threat Research Labs, and global network reach to monitor and analyze traffic to provide interactive and actionable threat data.
- Monitoring your traffic as it passes through CenturyLink infrastructure based on sampled network analysis
- Correlation of traffic against known malicious communication utilizing CenturyLink proprietary analysis and threat data
- Near real-time, customizable alerting for high-risk events
- Access to near real-time portal-based or SIEM reporting and analytics capabilities utilizing event data

Features:

- Portal provides actionable, automated, and context-rich reports
- 24/7 global Security Operations Center expert support
- Feeds to your Security Information and Event Management (SIEM)
- Historical views

Flexible Feature Options.

Available in enhanced and premium feature packages. We offer CenturyLink® Professional Services engagements as an optional add-on.

Pricing Model.

Pricing is based on three tiers for the amount of IP address space monitored and the service option purchased (Enhanced/Premium).

Why Choose CenturyLink for Adaptive Threat Intelligence Services?

Evolving Expansive View and Expertise: CenturyLink's Threat Research Labs combine with our global view into attack traffic to provide sophisticated analytics and analysis that evolves as attacks change in form, complexity and volume.

Cost and Operational Efficiencies: Portal/SIEM implementation reduces need for technology deployment and maintenance, while at the same time provides near real-time interactive customer-data-driven visualizations and customizable alerts.

Actionable Threat Intelligence: Tracks two-way communications to help defend against cyber threats.

Provides insights on attack patterns so you can research geographic trends, as well as review victim and successful attacker profiles.

Leveraging the power and knowledge of CenturyLink® Threat Research Labs, the CenturyLink Adaptive Threat Intelligence service provides data you can act on at a moment's notice, and in near real-time.
