

QWEST ANALOG TRUNKS

A trunk is a point-to-point connection between a customer's PBX and a Qwest Central Office. A trunk can provide inbound-only, outbound-only, two-way, or toll service. You have the flexibility to choose the combination of trunks that match your needs.

ADVANTAGES

- Can be engineered for special features and restrictions, permitting a business to control the type of calling allowed to each customer.
- Ideal for the business that has a need for switched access services greater than 1FB type lines.

Analog Private Branch Exchange service is not provided on a one-way calling basis. Therefore, the customer must choose a combination of in-only, out-only or two-way trunks to meet their calling needs. Analog PBX trunks are available in all central offices in the Qwest® local service territory.
