

Real-Time Application Recovery™

Eliminate downtime risks with a low cost, cloud-based service

Traditional costs of eliminating dangerous application interruptions and data loss can be prohibitive even though such events adversely affect your bottom line. Fortunately, with the CenturyLink™ Real-Time Application Recovery solution, you can use a cloud-based recovery and continuity service at much lower costs than conventional redundancy solutions.

First-class business continuity with no capital investment and no technological lock-in

Ensuring system availability and recovery, Real-Time Application Recovery uses an on-demand infrastructure. Typically implemented within 24 hours*, Real-Time Application Recovery completes your configuration with near-zero downtime, no capital expense, no technological lock-in and no administrative costs.

How it works

Within seconds of a server or network disruption, your mirror servers and current data become available at the data center. You can begin to work directly, securely and locally on your office network or from remote locations. Your active email, file and database-server content are immediately and automatically redirected to the data center, ensuring customers, suppliers and partners experience no interruptions.

Features

- Platform and application support
- Scalable architecture
- Data security controls
- Failover and recovery capability
- Test and access activity reporting 24/7/365
- Real-time DR tests
- Secure remote access
- Online statistical and status reporting
- 24/7/365 support

Supported platforms and applications:

- Microsoft® File Services
- Microsoft® Exchange
- Microsoft® SQL
- Microsoft® IIS
- Blackberry® Enterprise Servers
- Oracle® 9i/10g

End-to-end service with no administrative costs

Starting with a technical readiness assessment (RA) to understand your needs and technology environment, a qualified support engineer will help you configure your servers and applications that require mission-critical systems. After the system is set up, we will create new RA versions as changes take place in your environment as part of a business recovery audit trail.

Through your personal service portal, you can set up testing and real-time performance reporting to ensure your servers and systems are protected and available should they be required. If you need any assistance at any time, our 24/7/365 support team is available for you.

Pricing structure	
Setup fee per server	\$785
Monthly fee per server	\$665 (1 year)
	\$605 (2 years)
	\$550 (3 years)
Additional fees include setup, active failover and optional services such as seed devices and incremental storage.	

*The time to establish real-time system availability is dependent upon system configuration and Internet bandwidth constraints.
