

ACCESS SERVICE

8. Specialized Network Services

8.1 General

Specialized Network Services provide general service arrangements which are not offered under other sections of this service guide.

8.2 Reserved For Future Use

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service8.3.1 Description

Frame Relay Service (FRS) is a fast packet network that provides the customer high speed access and throughput to different customer addresses. Utilizing statistical multiplexing, the frame relay network enables the customer to allocate circuit bandwidth to applications as needed, rather than assigning fixed channels to specific applications.

Permanent Virtual Connections (PVCs) are logical channels that connect ports on a frame relay switch or between frame relay switches. PVCs are end-to-end, bi-directional channels that are established and disestablished via the service order process. A separate PVC must be established to each location that the customer desires to transmit data. These PVC channels are virtual because they are established in software tables and do not tie up facilities when not in use. Multiple PVCs can be defined over a single Frame Relay Access Link, thereby providing a single access line the capability to transmit data to multiple destinations.

Physical access to the Telephone Company's frame relay network is provided via a special access channel termination or an electrical cross-connect used in conjunction with expanded interconnection. Customers who purchase FRS must also ensure that the special access facilities ordered from the Telephone Company are equipped with Bipolar with 8 Zero Substitution (B8ZS) line code, as well as Extended Super Frame (ESF) capability for DS1 facilities. The Telephone Company will provision FRS to support industry standards for the User to Network Interface (UNI) and the Network to Network Interface (NNI).

FRS is offered where facilities exist. If it is necessary to construct facilities to satisfy service requests, the service may be provided pursuant to the Telephone Company's Special Construction provisions set forth in Section 14 following.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.2 Service Components(A) Access to the Frame Relay Network

Special access channel terminations or electrical cross-connects are used to connect the customer premises to the FRS UNI or NNI Port Connection. Special access channel terminations are available at speeds of 256 kbps through 1.544 Mbps for the UNI Port Connection and at 1.544 Mbps and 44.736 Mbps for the NNI Port Connection. Electrical cross-connects are available at 1.544 Mbps for the UNI Port Connection and 1.544 Mbps and 44.736 Mbps for the NNI Port Connection.

(B) User to Network Interface (UNI) Port Connection

The User to Network Interface (UNI) Port Connection is a standard interface used to connect the end user to the Telephone Company's frame relay network. It receives the data frame from the customer's network or CPE devices and verifies that the customer address destination is valid before relaying the frame. The UNI Port Connection is available at 256 kbps through 1.544 Mbps. The transmission speed of the UNI Port Connection may not exceed the transmission speed of the special access channel termination or electrical cross-connect. One special access channel termination or electrical cross-connect is required per UNI Port Connection.

(C) Network to Network Interface (NNI) Port Connection

The Network to Network Interface (NNI) Port Connection provides bi-directional polling between the Telephone Company's FRS switch and the interexchange carrier's or other customer's frame relay network.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.2 Service Components (Cont'd)(C) Network to Network Interface (NNI) Port Connection (Cont'd)

The NNI Port Connection is available at speeds of 384 kbps, 1.544 Mbps and 44.736 Mbps. The NNI Port Connection must be provided at the same transmission speed as the special access channel termination or electrical cross-connect. One special access channel termination or electrical cross-connect is required per NNI Port Connection

(D) Permanent Virtual Circuits (PVCs)

The PVC provides a software-defined electronic path between two port connections within the frame relay network. A UNI or NNI Port Connection can be associated with any number of PVCs. Since all PVCs need not be in use at the same time, it is possible for the total bandwidth of all PVCs associated with one Port Connection to exceed the bandwidth of the Port Connection. It is not possible, however, for the simultaneous aggregate of the PVC's throughput to exceed the bandwidth of the Port Connection. Such a relationship is referred to as over-subscription or overbooking, and when this occurs, there can be no guarantee that the bandwidth defined for that PVC will be available at any point in time.

(E) Committed Information Rate (CIR)

CIR defines the amount of data throughput on a designated PVC that the Telephone Company will support under normal operating conditions. Any data burst beyond the CIR may be labeled Discard Eligible (DE) if the data transfer rate exceeds the CIR of the PVC being used. If the frame relay network develops congestion, the frames marked DE may be discarded.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.3 Rates Conditions

The minimum service period for Frame Relay Service is one month.

When the customer orders additional PVCs with a designated CIR, the CIR nonrecurring charge shall apply. When a change is made to a customer's frame relay configuration at the customer's request, the administrative nonrecurring charge shall apply. Such changes are defined as those rearrangements necessary to add, delete, or rearrange the customer's configuration, including changes to CIRs. Although multiple changes may be caused by such actions, only one administrative charge will apply.

When the customer changes the CIR on an existing PVC, the CIR nonrecurring charge will apply in addition to the administrative nonrecurring charge.

8.3.4 FRS Term Discount Plans(A) General

Frame Relay Service Term Discount Plans (FRSTDPS) are available for UNI port connections at the speeds of 256 kbps through 1.544 Mbps and for 1.544 Mbps and 44.736 Mbps NNI port connections. A FRSTDPS provides the customer with discounted rates for the services listed. The customer agrees to a minimum service commitment per service on a state or national basis when the TDP is established.

Both the UNI and NNI port connections for a given circuit must be ordered for the same commitment period with the same service date for the same customer. A customer establishes a FRSTDPS by selecting all or a portion of their in-service port connections and committing those port connections to a minimum term of 3 years up to a maximum term of 5 years. Customers may disconnect or move port connections within the committed area (i.e., state or nation) and not be subject to termination liability charges as long as the commitment levels are maintained.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.4 FRS Term Discount Plans (Cont'd)(B) Ordering Provisions

The customer must order a FRSTDP in writing to the Telephone Company. A FRSTDP may be ordered based on the following plan options.

3 Years

5 Years

The customer must specify the plan and the length of the service commitment period. Once the plan is established, and commitment periods are agreed upon, standard access ordering procedures will be followed.

When a customer converts to a FRSTDP, no access order charges are applied toward facilities in-service at that time. If a customer moves from a month to month plan to a FRSTDP, or upgrades from one FRSTDP to another, no access order charges are applied.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.4 FRS Term Discount Plans (Cont'd)(C) Service Rearrangements

When a UNI or NNI port connection committed to a FRSTDP is rearranged, a charge equal to one half the UNI or NNI port connection nonrecurring charge associated with the month-to-month rates for that service will apply. Service rearrangements are changes to existing (installed) services which do not result in either a change in the minimum period requirements as set forth in 5.2.6(E) preceding or a change in the physical location of the point of termination at the customer designated premises. Changes in the physical location of the point of termination are treated as disconnects and starts, and will be assessed the nonrecurring charge associated with the month-to-month rates for that service.

(D) Termination Liabilities

If a customer disconnects any portion of their FRSTDP service prior to the expiration of the commitment period, the customer will be billed 50% of the monthly FRSTDP charges for the remaining portion of the committed term. For example, a customer disconnecting in the 12th month of a 3 year plan will be charged 50% of the remaining 24 months of billing.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.4 FRS Term Discount Plans (Cont'd)(E) Rate Changes

In this section, the term "rate" refers to the charges associated with the entire circuit covered by a FRSTDP. Rate increases or decreases will automatically be applied to the monthly term plan rates for the remaining term of the FRSTDP. If a Telephone Company initiated rate increase causes a customer's rates to increase by 10% or more at any one time, the customer may cancel the FRSTDP without incurring termination liability charges.

(F) Extension of a FRSTDP Commitment Period

FRSTDP commitment periods can be extended by the customer at any time during the term of the plan, up to a maximum of 5 years. The number of months accrued in the current plan will apply toward the new plan selected. For example, a customer having completed 15 months of a 3 year commitment can extend the commitment to 5 years and no additional charges will be assessed. The first payment will be considered the 16th payment under the new 5 year Plan.

(G) Renewal of a FRSTDP

At the end of the FRSTDP service commitment period, the customer may subscribe to a new FRSTDP at the prevailing rates set forth in Section 8.3.5 following. If the customer does not select a new FRSTDP, the rates will convert to the prevailing month-to-month UNI and NNI rates set forth in Section 8.3.5 following. The customer will have a 90 day grace period to renew their FRSTDP before month-to-month rates will be assessed.

(H) Cancellation Charges

When a customer cancels an order for frame relay services being provided under a TDP, cancellation charges, as set forth in 5.2.4 preceding, will be calculated using the nonrecurring charges associated with the month-to-month rates for the service being cancelled.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service8.6.1 Basic Service

Asynchronous Transfer Mode (ATM) service is a connection-oriented fast packet network service that permits the transmission of high speed data, voice and video traffic utilizing cell switching technology. ATM cells are fixed length cells that provide symmetrical or asymmetrical duplex transmissions. Utilizing statistical multiplexing, ATM service enables customers to allocate circuit bandwidth to applications as needed on virtual paths or channels. ATM service allows multiple communications applications to be transmitted within multiple paths or channels utilizing common fiber optic or copper facilities. ATM service allows for the interconnection of customer premises equipment that is ATM compatible.

Physical access to the ATM network is provided via an electrical cross-connect or an ATM access termination connecting the customer premises to the ATM User to Network Interface (UNI) or Network to Network Interface (NNI) port connection. Electrical cross-connects are available at speeds of 1.544 Mbps (DS1) or 44.736 Mbps (DS3). ATM access terminations are available at speeds of 1.544 Mbps (DS1), 3.088 Mbps (2xDS1), 4.632 Mbps (3xDS1), 6.176 Mbps (4xDS1), 7.72 Mbps (5xDS1), 9.264 Mbps (6xDS1), 44.736 Mbps (DS3), 155.52 Mbps (OC3), or 622.08 Mbps (OC12) and are provided in Section 8.6.2 following. When an electrical cross-connect is used in the provision of ATM service, the expanded interconnection regulations, rates and charges will apply in addition to the ATM rates and charges set forth in Section 8.6.6 following.

8.6.2 Service Components(A) ATM Access Termination

The ATM access termination rate element provides a communications path between the customer's ATM termination equipment and the serving wire center of that equipment. ATM access terminations are available at 1.544 Mbps (DS1), 3.088 Mbps (2xDS1), 4.632 Mbps (3xDS1), 6.176 Mbps (4xDS1), 7.72 Mbps (5xDS1), 9.264 Mbps (6xDS1), 44.736 Mbps (DS3), 155.52 Mbps (OC3), or 622.08 Mbps (OC12) levels. DS3, OC3 and OC12 ATM access terminations are based on distance.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service8.6.2 Service Components (Cont'd)(A) ATM Access Termination (Cont'd)

In addition, OC3 and OC12 access terminations will be provided with or without Telephone Company provided terminal equipment at the customer's premises. The mileage used to determine the monthly rate for access terminations located outside a Telephone Company wire center is the airline distance between the customer's designated premises and the Telephone Company serving wire center of that premises. The mileage measurement is determined by utilizing exchange maps and mileage tables located in designated Telephone Company offices for such purposes. When a customer elects to furnish its own terminal equipment at the customer's premises, the customer will work cooperatively with the Telephone Company to provide a compatible physical interface, and will identify approved equipment types for use in conjunction with Telephone Company provided equipment. The customer is responsible for providing all facilities and cabling necessary to connect customer provided equipment to the interface.

(B) ATM Interoffice Mileage

The ATM interoffice mileage rate element provides for the end office equipment and the transmission channel between the serving wire center of the customer's designated premises and the serving wire center of the ATM switch. ATM interoffice mileage rates are made up of the interoffice mileage facility rate and the interoffice mileage termination rate. ATM interoffice mileage rates are set forth in Section 8.6.6 following and are available at speeds of 1.544 Mbps (DS1), 3.088 Mbps (2xDS1), 4.632 Mbps (3xDS1), 6.176 Mbps (4xDS1), 7.72 Mbps (5xDS1), 9.264 Mbps (6xDS1), 44.736 Mbps (DS3), 155.52 Mbps (OC3), and 622.08 Mbps (OC12).

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service8.6.2 Service Components (Cont'd)(B) ATM Interoffice Mileage (Cont'd)(1) ATM Interoffice Mileage Facility

The ATM interoffice mileage facility rate recovers the cost of the transmission path which extends between the serving wire center of the customer's designated premises and the Telephone Company serving wire center of the ATM switch, and includes primarily outside plant used to provide the facility.

(2) ATM Interoffice Mileage Termination

The ATM interoffice mileage termination rate recovers the cost of the end office equipment associated with terminating the facility (i.e., basic circuit equipment and termination at the serving wire center and/or ATM switch). The Telephone Company applies a 50% billing percentage to the mileage termination fixed rate on jointly owned circuits, and applies 100% on wholly owned circuits. When the ATM interoffice mileage facility is zero (i.e., collocated service wire centers), neither the interoffice mileage facility nor the interoffice mileage termination rate will apply.

(C) User to Network Interface (UNI) Port Connection

The UNI port connection is a standard interface used to connect the end user to the Telephone Company's ATM network. It receives the data cell from the customer's network or CPE devices and verifies that the customer address destination is valid before transferring the cell.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service8.6.2 Service Components (Cont'd)(C) User to Network Interface (UNI) Port Connection (Cont'd)

The UNI port connection is available at speeds of 1.544 Mbps, 3.088 Mbps (2xDS1), 4.632 Mbps (3xDS1), 6.176 Mbps (4xDS1), 7.72 Mbps (5xDS1), 9.264 Mbps (6xDS1), 44.736 Mbps, 155.52 Mbps, and 622.08 Mbps. The UNI port connection must be provided at the same transmission speed as the electrical cross-connect or ATM access termination. One electrical cross-connect, special access channel termination or ATM access termination is required per UNI port connection.

(D) Network to Network Interface (NNI) Port Connection

The NNI port connection provides bi-directional polling between the Telephone Company's ATM switch and the interexchange carrier's or other customer's ATM network.

The NNI port connection is available at speeds of 1.544 Mbps, 3.088 Mbps (2xDS1), 4.632 Mbps (3xDS1), 6.176 Mbps (4xDS1), 7.72 Mbps (5xDS1), 9.264 Mbps (6xDS1), 44.736 Mbps, 155.52 Mbps, and 622.08 Mbps. The NNI port connection must be provided at the same transmission speed as the electrical cross-connect or ATM access termination. One electrical cross-connect, special access channel termination or ATM access termination is required per NNI port connection.

(E) Permanent Virtual Circuits (PVCs)

The PVC provides a software defined electronic path between two port connections within the ATM network. An intraexchange PVC defines a path across the Telephone Company's ATM network and the customer's premises. An interexchange PVC defines a path between two Telephone Company ATM networks. Meetpoint billing arrangements do not apply to interexchange PVCs. A UNI or NNI port connection may be associated with any number of PVCs.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.2 Service Components(E) Permanent Virtual Circuits (PVCs) (Cont'd)

Since all PVCs need not be in use at the same time, it is possible for the total bandwidth of all PVCs associated with one Port Connection to exceed the bandwidth of the Port Connection. It is not possible, however, for the simultaneous aggregate of the PVC's throughput to exceed the bandwidth of the Port Connection. Such a relationship is referred to as oversubscription and, when this occurs, there can be no guarantee that the bandwidth defined for that PVC will be available at any point in time. The maximum port oversubscription allowed is by a subscription factor of 500%. Multiple PVCs can be defined over a single ATM UNI or NNI Port Connection, thereby providing a single access line with the capability to transmit data, voice, and video to multiple destinations simultaneously. A PVC can be set up as either a Virtual Path (VP) or a Virtual Channel (VC) type connection. A VP may contain multiple VCs, referred to as tunneling. Tunneling allows customers to establish VCs or end to end connections between the customer CPE via VPs.

Customers may select from the following three Quality of Service (QoS) categories for PVCs to ensure greater reliability for mission critical application in the event of network congestion:

Lowest Priority – Unspecified Bit Rate (UBR)

Medium Priority – Variable Bit Rate-non-real time (VBR-nrt)

Highest Priority – Constant Bit Rate (CBR)

This flexibility helps to ensure maximum performance and satisfaction for individual customer communications applications.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.2 Service Components (Cont'd)(F) Information Rate (IR)

Information Rate (IR) defines the amount of data throughput on a designated PVC that the Telephone Company will support under normal operating conditions. IRs are traffic management parameters that allow the customer to fine tune implementation of ATM Service. The IRs of PVCs can be customer specified and can be ordered in increments of bandwidth. IRs can be used on CBR and VBR PVCs only. IRs for UBR are, by definition, not used, and IRs can be up to the line rate of the UNI port transfer rate. UBR uses available network bandwidth and is a "best effort" service, therefore, there are no guarantees with the delivery of UBR traffic. IRs are assigned to each PVC symmetrically (two-way). Any data burst beyond the IR may be labeled Discard Eligible (DE) if the data transfer rate exceeds the IR of the PVC being used. If the ATM network develops congestion, the cells marked DE may be discarded.

8.6.3 Service Provisioning

- (A) ATM service is offered where facilities exist. If it is necessary to construct facilities to satisfy service requests, the service may be provided pursuant to the Telephone Company's special construction provisions set forth in Section 14 following.
- (B) ATM service requires the use of industry standard CPE that functions as a multiplexer, aggregator, concentrator, or router. The Telephone Company will advise the customer of the type of CPE that the customer will need to purchase to support ATM service. The CPE functions to accumulate customer data and transfer it into an ATM format suitable for transmission over the ATM Network.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.3 Service Provisioning (Cont'd)

- (C) In the operation of ATM, the CPE captures arriving data into fixed-length ATM 53-byte cells. These cells contain a 48-byte cell user information segment, and a five-byte header containing a Virtual Path Identifier (VPI) and a Virtual Channel Identifier (VCI), identifying which PVC in the network should be used to forward the cell to the proper destination. The CPE sends the cells into the ATM network over an electrical cross-connect or ATM access termination. The ATM switch, located in the Telephone Company central office, reads the identifying header information and routes the cell to the proper destination over a VP and/or VC based on a preestablished PVC.
- (D) ATM service is capable of handling the requirements of bursty data sources because of the ability of the service to allocate additional bandwidth when not in use by other sources. ATM service can also transmit delay sensitive traffic, such as voice and video, on the same physical circuit, but with different QoS on separate PVCs within the same physical circuit.
- (E) The actual throughput or information rate (IR) for aggregated PVC bandwidths cannot exceed the port speed, or the port line transfer rate. The customer must specify, when ordering, the QoS for each PVC to be connected to the ATM network. The QoS category defines the performance parameters for each connection to meet specific networking requirements. The Telephone Company provides the following three QoS categories:

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.3 Service Provisioning (Cont'd)

(E) (Cont'd)

- (1) Constant Bit Rate (CBR) - for delay or timing sensitive traffic such as voice or interactive video, and provides a constant data rate and consistent delay parameters throughout the ATM network. CBR PVCs are given the highest priority in the ATM network, and are provisioned to provide the minimum Cell Delay Variation (CDV) or "jitter". The Peak Cell Rate (PCR), which is the highest transmission rate the logical connection will allow, must be specified by the customer.
- (2) Variable Bit Rate (VBR-nrt) - a non-real time service designed for bursty data applications that provides a preassigned variable bit rate. VBR-nrt requires three traffic parameters: (1) Peak Cell Rate (PCR), which defines the maximum rate of transmission, (2) Sustainable Cell Rate (SCR), which provides an average throughput information rate expected on the connection, and (3) Maximum Burst Size, which is the maximum number of consecutive cells that may be transmitted to the Telephone Company ATM network in a single burst at a rate that exceeds the sustained cell rate (SCR), but does not exceed the peak cell rate (PCR), assigned to the variable bit rate (VBR) connection. The default MBS is 100 cells, unless the customer specifies another value of less than 100 cells. Customers must specify the PCR, SCR, and MBS for ATM service. Oversubscription is allowed with VBR. The maximum subscription rate for a VBR PVC is 400%. Transmission speeds cannot exceed 400% of the SCR for durations greater than the MBS without encountering discard eligible cells, nor can transmission speeds exceed the port speed.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.3 Service Provisioning (Cont'd)

(E) (Cont'd)

- (3) Unspecified Bit Rate (UBR) - takes advantage of excess network bandwidth and is best suited for communication applications where timing of delivered data is not critical. PCR and SCR values are not used with UBR. An advantage of UBR is that ATM cells can be transmitted up to the port line rate, if available, rather than being limited to a predefined maximum PCR, as with VBR and CBR. However, throughput depends on the total data volumes being transmitted through the switch. UBR PVCs must be ordered at the same transmission speed as the port with which it is associated.

Since multiple PVCs may be defined on one physical port, it is possible for the cumulative data IRs of multiple PVCs to exceed the physical bandwidth of the port. This is referred to as oversubscription and, when this occurs, there will be no guarantee that the IR defined for the port and PVC will be available at any point in time.

For CBR PVCs, the customer may specify IRs in terms of PCR. The maximum PCR for a CBR PVC is limited to 99% of the port transfer rate. When CBR traffic is mixed with VBR and UBR on the same port, the sum of all the PCRs associated with the CBR PVCs must be subtracted from the port speed before calculating the subscription level for remaining VBR PVCs. The PCR should never exceed the PCR available at the lowest port access between the local and remote locations.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.3 Service Provisioning (Cont'd)

(E) (Cont'd)

For VBR PVCs, the user can burst above the SCR for short periods only. The limit for VBR transmission at the PCR is 100 cells. This limit is called the Maximum Burst Size (MBS). If the MBS is exceeded, a period of lower activity must follow to meet the SCR. IRs for UBR traffic are not specified and use only available network bandwidth and may burst up to the line rate.

8.6.4 Rate Conditions

The minimum service period for ATM service is one month.

The rates and charges for ATM service are set forth in Section 8.6.6 following, and are in addition to any applicable rates and charges set forth in any other sections of this service guide. There are two types of rates and charges that may apply to ATM service. These are monthly recurring rates and nonrecurring charges, both of which are billed in advance.

When a customer requests that a UNI or NNI port connection or ATM access termination be rearranged, a charge equal to one half the month-to-month UNI or NNI port connection or ATM access termination nonrecurring charge associated those services will apply. Service rearrangements are changes to existing (installed) services which do not result in either a change in the minimum period requirements as set forth in 5.2.6(E) preceding or a change in the physical location of the point of termination at the customer designated premises. Changes in the physical location of the point of termination are treated as disconnects and starts, and will be assessed the nonrecurring charge associated with the month-to-month rates for that service.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.4 Rate Conditions (Cont'd)

When the customer orders additional PVCs with a designated IR, the PVC nonrecurring charges shall apply. When a change is made to a customer's ATM configuration at the customer's request, the administrative nonrecurring charge shall apply. Such changes are defined as those rearrangements necessary to add, delete, or rearrange the customer's configuration, including changes to IRs. Although multiple changes may be caused by such actions, only one administrative charge will apply. When the customer changes the IR on an existing PVC, the PVC nonrecurring charge will apply in addition to the administrative nonrecurring charge.

Special construction charges, as set forth in Section 14 following, may apply when technical limitations and/or the lack of facilities exist, or if it necessary to construct facilities to satisfy service requests.

The customer should specify the IR and class of service for each PVC ordered. The IR is the maximum information rate at which the customer's traffic will be admitted to the ATM network without being designated eligible for discard. No individual PVC IR shall exceed 99 percent of the UNI Port Connection transmission speed. The sum of all PVC VBR IRs on a single ATM port must not exceed 500 percent of the port line speed remaining after removal of the sum of the CBR PVC speeds.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.5 ATM Term Agreement Plans(A) General

Asynchronous Transfer Mode Term Agreement Plans (ATMTAP) are available for UNI and NNI port connections, ATM access terminations, and ATM interoffice mileage. An ATMTAP provides the customer with discounted rates for the services listed. The customer agrees to a minimum service commitment on a per service basis.

(B) Ordering Provisions

The customer must order an ATMTAP in writing to the Telephone Company. An ATMTAP may be ordered based on the following plan options:

3 Years
5 Years

Once the plan is established, standard access ordering procedures will be followed.

When a customer converts to an ATMTAP, no access order charges are applied toward facilities in service at that time. If a customer moves from a month-to-month plan to an ATMTAP, or upgrades from one ATMTAP to another, no access order charges are applied.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.5 ATM Term Agreement Plans (Cont'd)(C) Service Rearrangements

When a UNI or NNI port connection or ATM access termination committed to an ATMTAP is rearranged as set forth in 8.6.4 preceding, a charge equal to one half the month-to-month UNI or NNI port connection or ATM access termination nonrecurring charge associated those services will apply.

(D) Termination Liabilities

If a customer disconnects any portion of their ATMTAP service prior to the expiration of the commitment period, the customer will be billed 50% of the monthly ATMTAP charges for the remaining portion of the committed term. For example, a customer disconnecting in the 12th month of a 3 year plan will be charged 50% of the remaining 24 months of billing.

(E) Rate Changes

In this section, the term "rate" refers to the charges associated with the entire circuit covered by an ATMTAP. Rate increases or decreases will automatically be applied to the monthly term plan rates for the remaining term of the ATMTAP. If a Telephone Company initiated rate increase causes a customer's rates to increase by 10% or more at any one time, the customer may cancel the ATMTAP without incurring termination liability charges.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.5 ATM Term Agreement Plans (Cont'd)(F) Extension of a ATMTAP Commitment Period

ATMTAP commitment periods can be extended by the customer at any time during the term of the plan, up to a maximum of 5 years. The number of months accrued in the current plan will apply toward the new plan selected. For example, a customer having completed 15 months of a 3 year commitment can extend the commitment to 5 years and no additional charges will be assessed. The first payment will be considered the 16th payment under the new 5 year plan.

(G) Renewal of a ATMTAP

At the end of the ATMTAP service commitment period, the customer may subscribe to a new ATMTAP at the prevailing rates set forth in Section 8.6.6 following. If the customer does not specify renewal terms in writing 90 days prior to the expiration of the three or five year service period, the commitment period and ATMTAP rates and conditions in effect at the time of expiration will automatically renew.

(H) Cancellation Charges

When a customer cancels an order for ATM services being provided under an ATMTAP, cancellation charges, as set forth in 5.2.4 preceding, will be calculated using the nonrecurring charges associated with the service originally ordered by the customer. The customer may terminate an ATMTAP at the end of the minimum commitment period with no penalty or obligation to continue service.

(I) Upgrades

When a customer upgrades a DS1, DS3 or OC3 service committed under an ATMTAP to a higher level SONET service offered by the Telephone Company, termination liability charges will not apply to the customer's DS1, DS3 or OC3 upgraded as long as the commitment period for the SONET level service is equal to or greater than the existing ATMTAP commitment period.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.7 Custom Access Solutions8.7.1 General

Custom Access Solutions is designed for the utilization of multiple voice and frame relay combinations over a single 1.544 Mbps facility. Custom Access Solutions includes frame relay channels and the use of a digital access and cross connect system (DACS) located in a Telephone Company wire center. The channels designated for frame relay will be routed to a frame relay switch through the DACS to a customer designated location. Custom Access Solutions is limited to the frame relay and DACS capability, and voice channels must be obtained separately. The frame relay bandwidth selected by the customer will determine the UNI port connection and PVC committed information rate provided. One PVC, with throughput equal to 50% of the UNI port connection, is provided with each Custom Access Solutions arrangement. For example, when the customer selects a Custom Access Solutions arrangement for 10 voice channels and 512 Kbps frame relay service, a PVC with a CIR of 256 Kbps will be provided. Additional PVCs requested by the customer will be subject to the rates and regulations set forth in Section 8.3 preceding.

Custom Access Solutions is designed to accommodate the voice and frame relay channel combinations identified below. The frame relay portion of Custom Access Solutions is designed as part of a voice/frame relay combination, with concurrent voice and frame relay availability. The customer is responsible for providing the voice capability.

Voice Channels	<i>Frame Relay Service</i>				
	256 Kbps (4 Channels)	384 Kbps (6 Channels)	512 Kbps (8 Channels)	768 Kbps (12 Channels)	1.152 Mbps (18 Channels)
6	10	12	14	18	24*
8	12	14	16	20	N/A
10	14	16	18	22	N/A
12	16	18	20	24	N/A
14	18	20	22	N/A	N/A
16	20	22	24	N/A	N/A
18	22	24	N/A	N/A	N/A
20	24	N/A	N/A	N/A	N/A

Shaded area reflects total channels utilized for each combination.

* This option is only available to customers in the states of Florida and Nevada.

(C)

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.7 Custom Access Solutions (Cont'd)8.7.1 General (Cont'd)

Custom Access Solutions will be provided over a 1.544 Mbps facility for connection to the Telephone Company's wire center equipment and frame relay network via a digital access and cross connect system. The provision of Custom Access Solutions requires terminating equipment (e.g., channel service unit) at the customer's designated premises to allow for the appropriate voice and frame relay channels. The customer is responsible for providing and maintaining the terminating equipment at the customer's designated premises. Custom Access Solutions includes the full bandwidth of a 1.544 Mbps facility, and cannot be provisioned over fractional DS1 channels.

Custom Access Solutions is available only in suitably equipped end offices where frame relay facilities exist. Information pertaining to end offices equipped to provide frame relay services is set forth in the National Exchange Carrier Association, Inc. Tariff F.C.C. No. 4.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.7 Custom Access Solutions (Cont'd)8.7.2 Rate Regulations

- (A) The service period for Custom Access Solutions is one, two, or three years. All Custom Access Solutions arrangements will begin in month one. If the customer requests that service be disconnected prior to the expiration of the service period selected, a 50% penalty will be assessed for the remaining months of the term. For example, a customer disconnecting in the 12th month of a 3 year plan will be charged 50% of the remaining 24 months of billing.
- (B) Customers may upgrade a Custom Access Solutions arrangement without incurring termination liability penalties under the following circumstances:
 - (1) The order for the disconnect of the existing Custom Access Solutions and the order for the upgraded service arrangement must be received at the same time, with no lapse in service between the installation of the new service and the disconnect of the existing service.
 - (2) The upgraded service is provided between the same customer and central office locations as the discontinued Custom Access Solutions service.
 - (3) The service period of the upgraded service is equal to or greater than the service period of the existing Custom Access Solutions.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.7 Custom Access Solutions (Cont'd)8.7.2 Rate Regulations (Cont'd)

(B) (Cont'd)

For example, a Custom Access Solutions arrangement equipped with 6 voice channels and 256 Kbps frame relay service may be upgraded to a higher bandwidth or longer term Custom Access Solutions arrangement, or a Custom Access Solutions arrangement may be upgraded to a next generation offering such as OptiPoint, SONET OC Ring, or Asynchronous Transfer Mode (ATM) service.

Additionally, customers may disconnect Custom Access Solutions, without penalty, should the total of the monthly recurring rates associated with the Custom Access Solutions increase by 10% or more at any one time. Rate decreases will automatically be applied to the monthly recurring rates for the remainder of the service period. If the customer does not specify renewal terms in writing 90 days prior to the expiration of the service period, the existing Custom Access Solutions rates in effect at the time of expiration will automatically continue. The customer can terminate Custom Access Solutions at the end of the service period with no penalty or obligation to continue the service.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.7 Custom Access Solutions (Cont'd)8.7.2 Rate Regulations (Cont'd)(C) Service Rearrangements

When a Custom Access Solutions is rearranged, a charge equal to one half the nonrecurring installation charge for that Custom Access Solutions arrangement will apply. Service rearrangements are changes to existing (installed) services which do not result in either a change in the minimum period requirements as set forth in 5.2.6(E) preceding or a change in the physical location of the point of termination at the customer designated premises. Changes in the physical location of the point of termination are treated as disconnects and starts, and will be assessed the full nonrecurring charge associated with the Custom Access Solutions arrangement selected.

(D) Cancellation Charges

When a customer cancels an order for Custom Access Solutions, cancellation charges, as set forth in 5.2.4 preceding, will be calculated using the nonrecurring charges associated with the Custom Access Solutions arrangement being cancelled.

(E) Special Construction charges, as set forth in Section 14 following, may apply where facilities and/or operating conditions do not permit the provision of Custom Access Solutions and the customer desires the Telephone Company to provision the Custom Access Solutions.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.7 Custom Access Solutions (Cont'd)8.7.3 Application of Rates

The rates and charges for Custom Access Solutions cover all associated service components (i.e., UNI port connection, PVC, and use of the DACS equipment). The Custom Access Solutions rates are set forth in Section 8.7.5 following, and are in addition to any applicable rates and charges set forth in other sections of this service guide. The applicable rates for Custom Access Solutions include monthly recurring rates and nonrecurring charges, both of which are billed in advance.
