

# MANAGED MICROSOFT® IIS

## HOSTING SERVICES

In a business environment where downtime or poor site performance can cost millions of dollars, delivering HTTP content to Web users and customers is a critical component of operations. Choosing the right server application and hosting provider is paramount to ensuring that availability and site performance are not compromised. With this in mind, CenturyLink Business has designed its Managed Microsoft Internet Information Services (MS-IIS) to be a fully managed application within the CenturyLink hosting portfolio.

The MS-IIS Web server application offers a reliable, high performance and secure vehicle for delivering HTTP content to end users. It is hosted on the CenturyLink Intelligent Hosting<sup>SM</sup>, Dedicated Cloud, Open Cloud and Utility Compute platforms within a CenturyLink Data Center and delivered across the MPLS enabled Application Transport Network (ATN). The significance of this is availability: CenturyLink has built redundancy into its data centers and network infrastructure to ensure customer applications are highly available. And because it's managed by CenturyLink, businesses are free from administering time-intensive tasks like patch deployment and system monitoring. What's more, CenturyLink has the breadth of expertise to accommodate any number of IIS deployments, from a simple, single instance to broader, complex solutions that require website creation, ongoing site management and custom monitoring — all of which are available through CenturyLink Professional Services.

### REPLICATION

For customers deploying multiple IIS nodes, CenturyLink can deploy replication technology to these environments as an add-on service. Replication facilitates copying content and configuration settings from one IIS node to another, so that both servers are able to offer identical resources to users. CenturyLink provides replication services in two configurations, local and remote. Local replication allows customers to deliver content on multiple nodes within the same CenturyLink data center while remote replication provides the same functionality in solution architectures that involve multiple, geographically diverse CenturyLink data centers.

### CENTURYLINK DELIVERS

- Software installation and configuration
- Monitoring and problem resolution on a 24/7 basis (18 monitors)
- Published performance statistics (21 metrics)
- Software updates
- Local or remote content replication\*

### INCLUDED FEATURE ENHANCEMENTS

- ASP.Net 1.1
- ASP.Net 2.0
- ASP.Net 3.0
- ASP.Net 3.5
- IIS FTP Service
- IIS NNTP Service
- IIS SMTP Service
- IIS WWW Service
- IIS Administrative Service

\* Optional Service, requires additional fee

## MICROSOFT IIS AND SAVVISSTATION

CenturyLink understands that businesses need real-time visibility into their MS-IIS environment to ensure optimized application performance, monitor usage trends for capacity planning and troubleshoot any issues that should arise.

CenturyLink has built a powerful Web-enabled tool that delivers this visibility in real-time to businesses so that they can manage their MS-IIS database environment and deliver HTTP content more easily and cost effectively.
