

A New Choice for  
Disaster Recovery:

## CenturyLink and Microsoft Azure

**Disasters strike. Accidents happen. Sometimes these events are unavoidable. But not everything is beyond your control.**

### Enable Business Continuity.

Are you sure your disaster recovery (DR) solution will work when you need it to? Implement a robust solution—and test it frequently—so your business stays running when disasters happen.

### Tap into the Cloud.

Avoid the costs of a second data center by using the cloud for DR.

### Choose CenturyLink SafeHaven.

CenturyLink® SafeHaven® DR as a service (DRaaS) couples robust DR with flexibility and choice, giving you an array of options for using the cloud to avoid the costs of downtime and data loss.

**Multi-cloud support:** Choose CenturyLink, Amazon Web Services, or Microsoft Azure.

**Deployment flexibility:** Manage your own environment, turn it over to CenturyLink experts, or create a custom arrangement.

- Self-service
- Fully managed
- Custom

**Global networking:** Connect to your DR site via the secure, high-performance CenturyLink global network.

- ~450,000 global route miles of fiber
- 60+ countries
- 100,000+ on-net buildings

**Validating, auditing, and testing:** Know that your DR strategy will work when disaster strikes.

**End-to-end management and support:** Centrally administer all your cloud environments or infrastructure—from private and hybrid environments to your public cloud-based DR. Tap into 24/7 expertise with CenturyLink® Managed Disaster Recovery Services.

### Select Azure.

Take advantage of your existing IT skills and simplify DR.

**Familiar platform:** Leverage your strong Microsoft relationship and familiarity with the Windows platform.

**Windows and beyond:** Support Windows plus Linux, VMware, and Microsoft Hyper-V virtual machines and physical servers across your hybrid IT environment.

**Security:** Safeguard your data. Microsoft has clearly defined security and privacy requirements, and Azure adheres to a broad set of compliance standards.
