

Hybrid IT: The New Normal of IT Architecture

Enterprises across APAC are embarking on the transformation journey from Traditional IT to Hybrid IT architecture deployment models.

Defining Hybrid IT

Hybrid IT is a strategic approach that improves the alignment between IT Services and business objectives. It is a mix of physical and virtual infrastructure services hosted in both on- and off-premise environments, helping IT transform from a cost center to a hub of innovation and business acceleration.

Transforming Strategic Priorities for IT

Empowering To Achieve Growth Momentum

Enabling Risk Mitigation

Establishing The Digital Transformation Platform

Increasing Awareness of Hybrid IT

Increasing Outsourcing to third party Managed Service Providers

Transforming IT Deployment Model

Essential Guidance for Partner Selection

1 **A solid track record** in delivering mission-critical Hybrid IT solutions globally

2 **Recognized globally** as a leader and with Asia Pacific support

3 **Security at every level** from people, process to product

4 **Robust global network reach**

5 **Cloud offering** that is built on proven enterprise-class technology
