

# CenturyLink Ethernet

CenturyLink Ethernet (CE) is a next-generation Layer 2 networking service that enables businesses to extend their LAN network to connect multiple locations spread across metro, regional or national footprints. CE is delivered over CenturyLink's latest network platform that employs automated, programmable, rapid provisioning technology. This enhanced service allows for significantly reduced service delivery timeframes, automated proactive notification in the event of a fault, reduced repair intervals and an advanced self-service portal is designed to ease network management.
