

# NETWORK UNIVERSAL AND NETWORK ENTERPRISE

## YOUR AGENCY'S POWERFUL CONNECTION TO IT MODERNIZATION

The Networkx program from CenturyLink provides federal agencies with next-generation solutions that offer a complete array of transport, security, wireless, management and applications services built into the foundation of our global converged services network. Our interoperability, cost-effectiveness, service quality and successful implementations of government applications on a converged network deliver the simplicity your agency demands. Combine our technology leadership and team composition with proven, flexible connections to modernize your legacy network at your own pace — while also leveraging one of the most cost-effective and price-competitive contract vehicles.

### Team Expertise

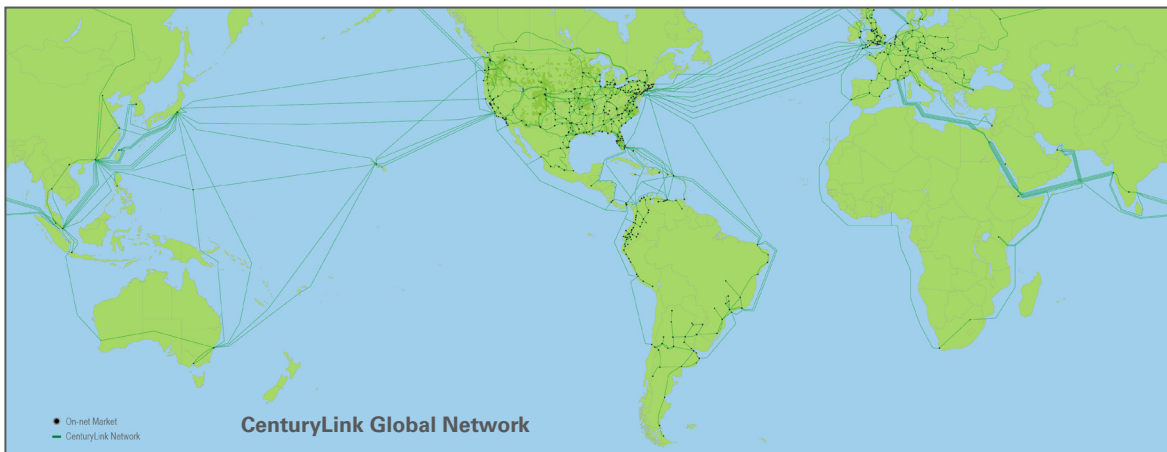

CenturyLink leads a team of industry-recognized providers with global reach and local expertise. With over 30 global partners, including Small and Disadvantaged Businesses, the CenturyLink team is empowered to address the needs of federal agencies as they continue to evolve their networks.

### Program Management Focus

- Dedicated program and transition Staff
- Robust, secure, web-based self-service portal
- Customizable, ad-hoc reporting
- 24/7 customer support

### Transformation

Recognized as a market leader in effective and timely service transition, CenturyLink actively works with GSA and agencies to add new services — as needed — that meet evolving requirements. We've successfully completed major transformations of mission-critical networks for defense, homeland security, law enforcement, air traffic control and other federal agencies using our proven scope, design, build, run methodology. And with many Networkx transitions and transformations already underway, we look forward to supporting you and your mission requirements

## Networkx Service Offerings

As a facilities-based provider, CenturyLink offers Networkx customers a full range of communications transport services, including Multimode wireless LAN, management and application services, as well as third party vendor services. Our comprehensive security services are tailored to help protect your network infrastructure and data from malicious cybersecurity attacks.
