

Summary of Notes for CenturyLink Regional Performance Results Report

January 10, 2019

General Comments:

- This Summary of Notes is based on the current PID in effect in each state in accordance with state-by-state implementation. Detailed information on which PID (Exhibit B) version is in effect can be viewed on line at <http://www.centurylink.com/wholesale/clecs/nta.html>
- Instances where no CLEC and/or CenturyLink results are reported for a particular month, and instances where no measurement is reported, are due to no CLEC activity.
- New Service Quality (OP-5) and Repair Repeat Report Rate (MR-7) are reported one month in arrears.
When a documented code change includes one of these PIDs, the impacted month is one month behind. As an example, if the change applied to OP-3, OP-4, and OP-5 as was completed in the June 2017 release, June would be reported in the implementation column. This would indicate that the change applied to June results going forward for OP-3 and OP-4, but since OP-5 is reported one month in arrears, the change applied to the May results reflected on the June report and going forward.
- When a change requires a rerun of historical data the effective date column will record the start month for the rerun.
- Summary of Notes is published on an as needed basis when reportable changes to the reports are made.

Products (if applicable)		Description of Note/Comment	Implementation Month	Effective Month
PID Numbers				
BI-4A	Retail Product used for parity with UNEs and Resale Aggregate	Billing measure, BI-4A, is defined as diagnostic only. It will continue to report all appropriate Wholesale and retail data out of like systems during phased system conversions.	Jan-19	Jan-19
