

### Summary of Notes for CenturyLink Regional Performance Results Report

September 28, 2019

**General Comments:**

- This Summary of Notes is based on the current PID in effect in each state in accordance with state-by-state implementation.  
Detailed information on which PID (Exhibit B) version is in effect can be viewed on line at <http://www.centurylink.com/wholesale/clecs/nta.html>
- Instances where no CLEC and/or CenturyLink results are reported for a particular month, and instances where no measurement is reported, are due to no CLEC activity.
- New Service Quality (OP-5) and Repair Repeat Report Rate (MR-7) are reported one month in arrears.  
When a documented code change includes one of these PIDs, the impacted month is one month behind. As an example, if the change applied to OP-3, OP-4, and OP-5 as was completed in the June 2017 release, June would be reported in the implementation column. This would indicate that the change applied to June results going forward for OP-3 and OP-4, but since OP-5 is reported one month in arrears, the change applied to the May results reflected on the June report and going forward.
- When a change requires a rerun of historical data the effective date column will record the start month for the rerun.
- Summary of Notes is published on an as needed basis when reportable changes to the reports are made.

PID Numbers	Products (if applicable)	Description of Note/Comment	Implementation Month	Effective Month
OP-5A	EEL DS1	The product category of EEL DS1 under the OP-5A metric had not been included in the PID output reports. Volume was minimal, no PAP processing or reporting was impacted, and all data was intact. As of the Effective Month, all volume and results are reflected with the 13 rolling month history of the PID reports.	Sep-20	Aug-20
